/ library is a subtracted library derived from NH18 Map M s2 library is a subtracted library derived from a mixture of normalized library derived from ten regions of the mouse brain (cerebellum, brain stems, olfactory bulbs, hypothalamus, cortex, amygdala, basal ganglia, pineal gland, striatum, hipoccampus). The driver used for subtraction consisted of a pool of 5,000 clones from the NH18 Map M s1 library and a pool of 5,000 clones obtained from non-normalized and normalized mouse brain

/note="Organ: brain; Vector: pBluescript II KS(+); Site_1: BCORI; Site_2: Not1; This normalized library was constructed_from 1 million independent clones. CDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand reaction, double-stranded cDNA was blunted, ligated to Not1 adapters, digested with ECORI, size-selected, and cloned into the Not1 and ECORI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was used."

This sequence was derived from the FAPESP Schistcosoma mansoni EST
Genome Project. All sequences in the project were assembled and
annotated. This entry and all the assembled sequences can be seen

useful for treating interacts to new NOVA polypeptines. The invention is useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, or signal processing and metabolic pathway modulation in a subject, or signal processing and metabolic pathway modulation in a subject, or signal processing and metabolic pathway infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease), immune clasorders, haematopoical for treating or preventing cirrhosis, the invention are also useful for treating or preventing cirrhosis, pancreatitis, learning and memory defects, infertility, congenital heart of defects, acne, hair growth, pigmentation disorders, endocrine diseases, respiratory disease, bone marrow transplantation, endocrine diseases, allergy and infilammaticion, nephrological disorders includes infilammaticion, nephrological disorders and age-related disorders. The present nucleic acid sequence represents a NOVX gene. This sequence corresponds a NOVX protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       . The polyphore of the microarray. The polypeptides, polymucleotides, agonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of GODD, particularly cell proliferative (e.g. arteriosolescion de GODD, particularly cell proliferative (e.g. arteriosolescions), atherosolerosis, cirrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thromobocytopaenia or cancer), developmental circularly elsorders (e.g. Alzheimer disease, Parkinson's disease or epilepsy), reproductive disorders (e.g. infertility or a disruption in the menstrual cycle), or autoimmune (inflammatory disorders (e.g. AlDS, (acquired immunodeficiency syndrome) allergies, asthma, autoimmune thy productive disorders (e.g. infertility or a disruption in the menstrual cycle), or autoimmune (inflammatory disorders (e.g. AlDS, (acquired immunodeficiency syndrome) allergies, asthma, autoimmune thy productive disorders (e.g. infertility or a disruption in the contact dermatities, crohn's disease, disbetes mellitus, costeoporosis, pancreatitis, rheumatoid arthritis, osteoporosis, pancreatitis, rheumatoid arthritis, curbits, or viral, bacterial, thingal, parasitic, protozoal or helminthic infections. They are also useful in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid and mino acid acid and acid accidents.
                             (cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to CGDD, a biologically active fragment or an immunogenic fragment. Also included are the polynucleotides encoding CGDD1-12, a recombinant polynucleotide comprising a promoter sequence operably linked to the CGDD polynucleotides, a cell transformed with the recombinant polynucleotide, a transformed with the recombinant polynucleotide, a transgenic organism comprising the recombinant polynucleotide, an anti-CGDD antibody, screening for compounds which bind to/modulate or are anti-agonists of CGDD or alter the expression of CGDD polynucleotide and a
        invention relates to an isolated polypeptide comprising CGDD1-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CGDD protein

The NOV proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, AIDS, diabetes, obesity, asthma, also nepropathy, cirthosis, arthritis, AIDS, diabetes, obesity, infections (e.g. bacterial, viral, parasitio), stroke, muscular dystrophy, epilepsy and other wasting disorders associated with chronic diseases. NOV1 is a TEN-M4 like protein and the NOV1 gene is localised to chromosome 11

New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autolmmune of vesicul diseases.

Claim 8; Page 119-121; 444pp; English.

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, corporated, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, antiinflammatory, antitheumatic, antibacterial, fungicide, immunosuppressive, antianlergic, antitheumatic, antianthritic, virucide, immunosuppressive, antianlergic, and can be used in gene protozoacide and antihelminthic activities, and can be used in gene throughous proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a numma disease selected from NOVX-associated disorder. Such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. cystic fibrosis, cysthemic cerebrovascular disease, Alzheimer's disease or Pick's disease), disorders of vesticular transport (e.g. cystic fibrosis, disorders (e.g. ulcerative colitis, or gastrointestinal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be used in chromosome mapping, identifying individuals from minute cubelly and in forensic identification of a biological sample. The present sequence encodes human NOVISC, which is

The present live describes movel numban proteins designated Nova, where X is 1 to 20 e.g. NOVI. NoVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOVI. NoVX sequences can have neuroprotective, cytostatic, antinicalmanatory, antinhematic, antinherbritic, virucide, immunosuppressive, antinicalmanaemic, antinhedretic, included, immunosuppressive, antinicalmanemic, antinhedretic, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, included, in

New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune di seases.

Claim 8; Page 110-112; 444pp; English.

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, antionvalsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, antianflammatory, antitheumatic, antianthritic, virucide, immunosuppressive, antiallergic, antianaemic, antibacterial, fungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NoVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers (e.g. reutaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or Pick's

disbease), disorders of vesicular transport (e.g. cystic fibrosis, diabetes mellitus, Grave's disease, or gottre), gastrointestinal disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic and protozoal infections. The NOYX proteins can be used as immunogens to produce antibodies and as vaccines. The NOYX nucleotide sequences may be used in chromosome mapping, identifying individuals from minute biological samples (tissue typing), and in forensic identification of a biological sample. The present sequence encodes human NOVISa, which is

associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, diso

Claim 8; Page 123-125; 444pp; English.

diseases.

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, antiinflammatory, antinhementic, antiarthritic, virucide, immunosuppressive, antiallergic, antianeamic, antiarthritic, virucide, protozoacide and antihemininhem cativities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the human disease selected from NOVX-associated disorder, such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or pick's disease), disorders of vesticular transport (e.g. cystic fibrosis, disorders of vesticular transport (e.g. cystic fibrosis, disorders of vesticular transport (e.g. cystic fibrosis, disorders of ulcerative collitis, or gastric and duodenal disorders), cutofimmune diseases (e.g. allergic reactions, autoimmune haemolytic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological samples (fissue typing), and in forensic identification of a biological samples (fissue typing), and in forensic identification of a biological samples (fissue typing), and in forensic manner. sample. The present sequence encodes human NOV15d, which chromosome 4 biological located on

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                    The present invention relates to methods of detecting a prostate cancerassociated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancerassociated polymucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polymucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals from the tissues of various organisms such as humans or other mammals concidence, sheep and dogs). The methods of the invention are useful for diagnosing or treating prostate cancer. The prostate cancer or agents that associated genes are useful for diagnosing or treating prostate cancer. The nucleic acid sequences are particularly cushlin gene therapy, as a vaccine or in antisense applications.

ABK92115-ABK92263 represent prostate cancer-associated polymucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2329

                                         The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynetides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g stem cell growth factor activity, hematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leuvaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the

WO200157190-A2 09-AUG-2001

```
The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the nucleic acids encoding them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, carcinomas, melanomas, gliomas, astrocytomas, congenital neonatal alloimmune thrombocytopaenia, neurological disorders, neurodegenerative disorders, nerve trauma, familial myelodysplastic syndrome, Charcot-Marie —Tooth neuropathy, demyelinating Gardner syndrome, familial myelodysplastic syndrome, mental health conditions, immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polypeptides designated as FCTRX polypeptides, useful in detection, prevention and treatment of a broad range of pathological states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 9; Page 33-35; 215pp; English.
                                                                                                                                                                                                                                                                                                                        Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mezes PS,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to FCTRX polypeptides and the polymucleotides encoding them. The sequences of the invention are useful for the encoding them. The sequences of the invention are useful for the manufacture of a medicament for diagnosing and treating disorders associated with the FCTRX polypeptide, such as colorectal cancer, adenomatous polyposis coli, myelogenous leukaemia, congenital neonatal cautoimmune thrombocytopenia, malignant tumours, malignant brain tumours, mammary tumours, human gloomas, satrocytomas, renal cell carcinoma, breast adenocarcinoma, neurological disorders, carcinoma, pentological disorders, mellial myelodysplastic call and granular cell carcinomas, neurological disorders, conditions, immunological disorders, and infection, asthma, lung diseases, male and female reproductive disorders, and infection, asthma, lung deficiency, desmoid tumour, turcot syndrome, liver cirrhosis, hepatitis confection, aspinocerebellar ataxia, plasmodium falciparum infection, groenouw's corneal dystrophy and lattice corneal dystrophy and lattice corneal dystrophy and lattice corneal distrophy. This sequence represents cDNA encoding an FCTRX polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2493

The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the nucleic acids encoding them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, carcinomas, melanomas, astrocytomas, congenital neonatal alloimmune thrombocytopaenia, neurological disorders, neurodegenerative disorders, nerve trauma, familial myelodysplastic syndrome, Charcot-Marie Tooth neuropathy, demyelinating Garddner syndrome, familial myelodysplastic syndrome, mental health conditions, immunological disorders, allergy and infection, bronchial asthma, Avellino type coshnophilia, lung diseases, reproductive disorders, infertility, male and female reproductive disorders, deafness, glyroprotein Ia deficiency, desmoid disease, turcot syndrome, liver cirrhosis, hepatitis C, gastric disorders, pancreatic diseases such as diabetes, Schistosoma mansoni infection Spinocrebellar ataxia, Plasmodium falciparum parasitaemia, Corneal dystrophy-Greonouw type I, Corneal dystrophy-Jattice type I and Reis-Bucklers conneal dystrophy. This sequence represents DNA encoding the FCTR34 homologue FCTR3f
                           Novel polypeptides designated as FCTRX polypeptides, useful in detection, prevention and treatment of a broad range of pathological states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 9729 BP; 2548 A; 2629 C; 2438 G; 2114 T; 0 U; 0 Other;

Human FCTR3f cDNA.

```
The invention relates to FCTRX polypeptides and the polynucleotides

cnooding them. The sequences of the invention are useful for the

manufacture of a medicament for diagnosing and treating disorders

cassociated with the FCTRX polypeptide, such as colorectal cancer,

adenomatous polyposis coli, myelogenous leukaemia, congenital neonatal

cutoimmune thrombocytopenia, malignant ovarian tumours, malignant brain

cautoimmune thrombocytopenia, malignant ovarian tumours, malignant brain

cautoimmune thrombocytopenia, malignant ovarian tumours, malignant brain

carcinoma, breast adenocarcinoma, ovarian carcinoma, melanomas, clear

call and granular cell carcinoma, ovarian carcinoma, melanomas, clear

cell and granular cell carcinoma, neurological disorders,

cell and granular cell carcinoma, familial myelodysplastic

syndrome, Charcot Marie-Tooth neuropathy, Gardner syndrome, mental health

conditions, immunological disorders, allergy and infection, asthma, lung

diseases, male and female reproductive disorders, deafness, glycoprotein

deficiency, desmoid tumour, turcot syndrome, liver cirrhosis, hepatitis

c', gastric disorders, pancreatic diseases, diabetes, schistosoma mansoni

cinfection, spinocerebellar ataxia, plasmodium falciparum infection,

direction, scincerepersonered control corrections and strice corneal dystrophy. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New FCTRX polypeptide and encoding polynucleotide, useful for preventing or treating FCTRX-related disorders, such as cancer, autoimmune, neurodegenerative, gastrointestinal, reproductive and inflammatory
renal cell carcinoma; melanoma; clear cell carcinoma; granular cell carcinoma; neurological disorder; neurodegenerative disorder; nerve trauma; neurodegenerative disorder; nerve trauma; familial myelodysplastic syndrome; Charcot-Marie-Tooth neuropathy; Gardner syndrome; mental health condition; immunological disorder; allergy; asthma; lung disease; reproductive disorder; deafness; glycoprotein deficiency; desmoid tumour; turcot syndrome; liver cirrhosis; hepatitis C; gastric disorder; pancreatic disease; diabetes; schistosoma mansoni infection; spinocerebellar ataxia; plasmodium falciparum infection; Groenouw's corneal dystrophy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 9729 BP; 2548 A; 2629 C; 2438 G; 2114 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel differentially regulated genes and polypeptides encoded by them. Sequences of the invention are useful in diagnosing, staging, monitoring, prognosticating, preventing, treating or determining the predisposition to diseases or conditions such as prostate cancer. They may be used as molecular markers, drug targets, vaccines, in gene therapy, research, clinical medicine or forensic science. The present sequence is a differentially regulated prostate cDNA, Pc099 which codes for teneurin-2. Pc099 gene is located on chromosome 5q34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GlnLeuGlyTrpArgGlyAlaGlyCysAspThrSerMetGluThrAlaCysGlyAspSer 92

New isolated human differentially-regulated breast cancer polymucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer. Claim 2; SEQ ID NO 79; 127pp + Sequence Listing; English.

The invention relates to isolated polynucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or alisenese therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pot\_sequences

## gb\_gss2:\* 29:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gelectrophoresis. Vector DNA was prepared from a derivative of pwD42 (gilfy19114[gb]AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coll X110-Gold (Stratagene) cells and selected for ampicillin resistance."
